Preface

The following conventions are used in this document:

Bold	Used for information that is typed, pressed, or selected in executables and instructions. For example, select connect to host .
<i>Italics</i>	Used for file names, directories, scripts, commands, user IDs, document names, and Bibliography references; and any unusual computerese the first time it is used in text.
<u>Underline</u>	Used for emphasis.
Arrows <>	Used to identify keys on the keyboard. For example <Return>.
“Quotation Marks”	Used to identify informal, computer-generated queries and reports, or coined names; and to clarify a term when it appears for the first time. For example “Data-Generation Report.”
Courier Font	Used to denote anything as it appears on the screen or command lines. For example <code>tar xvf dev/rmt/3mm</code> .
Capitalization	Used to identify keys, screen icons, screen buttons, field, and menu names.

1. Software Version Description

1.1 Scope

These Installation Procedures (IP) provide a quick reference for installing the Netscape Catalog Server (NSCAT) segment for the Defense Information Infrastructure (DII) on Windows NT-based machines.

1.1.1 Identification

Segment Name: Netscape Catalog Server
Segment Type: COTS
Prefix: NSCAT
Home Directory: *C:/h/COTS/NSCAT*
Required License: Netscape Catalog Server License
Version Number: 1.0.0.0/1.0
Platform: Intel PC with Windows NT 4.0

1.1.2 System Overview

Purpose: NSCAT is a new class of server that enables turn key creation, management, and export of full-featured catalog services. The information on the Internet can be searched or navigated with services like Yahoo, but it is difficult for an enterprise to provide the same type of services for the resources on their intranet. NSCAT provides tools to build catalog services that search for resources by keywords or navigate through the customized classification scheme. NSCAT also provides a full set of administration tools.

Usage: Highly effective cataloging, rich search services, multiple collection methods, encryption, access control, server management, content creation, and management. NSCAT is built on open standards (i.e., SOIF, RDM, and HTTP).

Reference: “Netscape Catalog server - Administrator’s Guide (NT)” from Netscape Communications Corporation (accompanies each licensed copy of the Netscape Catalog Server). On-line documentation accompanies the software, and additional documentation can be downloaded from Netscape at <http://www.netscape.com/>.

1.1.3 Product Information

Product Qualification:	NSCAT has been approved for delivery by the DII Engineering office.
Product Restrictions:	DISA purchased a 95,000 person user license for each of the SuiteSpot servers. Thus, as long as fewer than 95,001 users are being served, DISA can deploy an unlimited number of Netscape Catalog Servers. This product cannot be released outside of the United States.
Product Dependencies:	This segment requires that the commercial off-the-shelf (COTS) product, Netscape Catalog Server, has been installed on the target computer before the segment is installed. If the incorrect version of Netscape Catalog Server is installed, the installation will terminate.

2. Referenced Documents

This and other segment documentation provide segment description and installation instructions. User administration and usage is provided in the Netscape Catalog Server Administrator's Guide for Windows NT. Further information about this product can be obtained from the Netscape Communications Corporation web site at:

http://search.netscape.com/comprod/server_central/product/catalog/index.html.

This page intentionally left blank.

3. Version Description

3.1 Inventory of Material Released

Two 3.5" diskettes comprise the software delivery. One is labeled "1 of 1; master" and the other "1 of 1; backup." Each tape contains NSENT in "MakeInstall" format. Also included in the delivery are 3.5" floppy disks containing the delivery documentation.

3.2 Inventory of Software Contents

The software delivered is "Catalog Server, Version 1.0" as produced by Netscape Computer Communications, Corporation.

3.3 Changes Installed

Not applicable.

3.4 Waivers

The following delivery documents have been waived by the DII Engineering Office: Software Requirements Specification, Database Design Document, System Administrator's Manual, Software User's Manual, Operator's Manual, and Software Test Plan.

3.5 Adaptation Data

Not applicable.

3.6 Installation Instructions

Installation Instructions for this segment are provided in a separate document. The segment requires 1KB of disk space and 32 MB of RAM.

3.7 Possible Problems and Known Errors

None.

This page intentionally left blank.

4. Notes

None.
